

Numeric synthesis (summary)

series	outer_B	inner_B	mean_cov	med_cov	std_cov	p95_cov	med_width [rad]
bootstrap (CH10)	400	2000	0.929	0.935	0.022	0.952	0.43538

Protocol: M=400 outer runs per N (outer_B). Bars = Wilson 95% on M. Nested bootstrap outer_B=400 (coverage), inner_B=2000 (inner CI); α=0.05.
Mean 95% CI width [rad]; log–log fit width ≈ a·N^b; bootstrap (CH10): b=-0.45.
